

Cleaning Instructions:

Professional dry cleaning is recommended for all Hanes drapery lining products unless otherwise noted in the detailed description of the product.

DRY CLEANING

1. Inspect draperies for labels that recommend special care. Classify them for cleaning method.
2. Make sure the draperies have been measured before cleaning. Pass this information to the dry cleaner.
3. Remove all drapery hooks and pins. Look for and remove any sharp objects attached to draperies or in the machine.
4. Run underweight loads. Do not overload.
5. Run a 5 minute cycle in **Perchloroethylene** solution.
6. Extract all dry cleaning solution.
7. Tumble dry. **DO NOT EXCEED 120° Fahrenheit (50° Celsius) TUMBLER TEMPERATURE!**
8. Hang immediately. Do not leave in hamper.

HAND WASHING

For face fabrics check manufacturer's recommendation for washability. Only wash smaller curtains:

1. Loosen tape draw strings (if any) and remove all hooks.
2. Follow curtain fabric care label recommendations where given.
3. Use mild detergent or soap flakes - follow manufacturer's recommendations.
4. Ensure that the flakes or detergent are dissolved fully before immersing the curtains.
5. Do not rub acrylic foam areas - squeeze gently.
6. Water temperature should not be greater than warm for linings or cooler if required by the face fabric manufacturer.
7. Rinse thoroughly - detergents left in the curtains can cause severe deterioration to certain face fabrics.
8. Do not use bleach in any form.

After washing, shake curtains to remove excessive water. Do not wring out or squeeze. Hang curtains on a suitable line, from the heading, full length in open width to drip dry. If curtains have to be placed over a line, make sure that the line is well padded to avoid a permanent crease, and distribute the weight evenly.

When dry, re-hang the curtains and allow to condition at room temperature for a few days.
